PROFESSIONAL SUMMARY

Full-stack developer and Information Technology student who builds web and mobile applications, with a current focus on generative AI. Built and deployed Findry, an AI job-matching platform for the Philippine tech market, and PipAI, a conversational AI assistant, alongside mobile apps in Flutter and React Native. Dean's Lister and Academic Scholar.

PROJECT EXPERIENCE

Full-Stack Developer **2026**
Findry - AI Job Matching Platform *findry-ph.vercel.app*

- Built a job-matching platform for the Philippine tech market with React, TypeScript, Node.js, Express, and MongoDB, giving job seekers and employers two separate portals that meet only at the point of application.
- Designed an explainable match score weighing skills (45%), experience (30%), and education (25%), with a full breakdown of matched and missing skills returned with every result.
- Integrated Gemini for resume parsing and skill suggestions behind a swappable provider interface, keeping AI out of the scoring path and falling back to a local engine on any AI error.
- Implemented JWT sign-in, password hashing, request validation, and email verification with 6-digit codes.

Full-Stack Developer **2026**
Lablet - Medical Technology Study App *School Project*

- Built a responsive study app with Next.js, TypeScript, and Supabase covering the six major Medical Technology subjects, with review material, quizzes, timed mock exams, and progress tracking.
- Implemented spaced-repetition flashcards and in-browser PDF and PowerPoint reading that turns a student's own pages into flashcards without uploading the files.

Mobile and API Developer **2026**
Pinay Stars - Actress Directory App *github.com/StphenThy/pinay-stars*

- Built a React Native and Expo app where members browse, search, favorite, review, and submit profiles, and admins approve submissions and manage records.
- Developed a custom PHP and MySQL REST API with full CRUD, token-based accounts, rate limiting, reviews, and notifications, and integrated the TMDB API for film and TV posters.

AI Application Developer **2025**
PipAI - Conversational AI Assistant *pipaipoy.web.app*

- Built and deployed an AI assistant on Firebase for natural conversation, creative writing, coding help, and learning new topics.

Mobile Developer **2024**
SolarBuddy - Solar Energy Companion App *solarbuddy-16093.web.app*

- Built a Flutter and Supabase app with user accounts, solar monitoring, hourly forecasts, analytics charts, and a usage planner that schedules appliance tasks by power and duration.

EDUCATION

Bachelor of Science in Information Technology, Major in Healthcare Technology **2023 - 2027 (Expected)**
University of the Immaculate Conception *Davao City*

- Dean's Lister and Academic Scholar

Senior High School, Science, Technology, Engineering, and Mathematics Strand **2021 - 2023**
Holy Cross College of Calinan *Davao City*

- Best Capstone Awardee for a hardware air quality monitoring system that detects, displays, and helps filter air pollutants

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, PHP, Dart, SQL, HTML, CSS
Frameworks: React, Next.js, React Native, Expo, Flutter, Node.js, Express, Vite, Tailwind CSS, GSAP
Data & Backend: MongoDB, Mongoose, MySQL, Supabase, Firebase, REST APIs, JWT
AI & Computer Vision: Gemini API, TensorFlow.js, OpenCV, MediaPipe, NumPy, Tesseract.js
Tools: Git, GitHub, npm, ESLint, Vercel, Render
